

GBLIN PROTOCOL

THE ALGORITHMIC SOVEREIGN

1. THE SANCTUARY OF VALUE

In an era of systemic monetary debasement and market chaos, GBLIN emerges as an autonomous decentralized institution. It is not a mere cryptocurrency, but an agnostic algorithmic index engineered for the geometric survival of capital. GBLIN transforms market volatility into mathematical stability, ensuring every token is 100% collateralized by a premium treasury of WETH, cbBTC, and USDC.

2. GLOBAL VOLUMETRIC ENGINE

Unlike static indexes, GBLIN utilizes a Global Volumetric Engine. Through Chainlink Oracles, the protocol queries global 24h trading volumes. Assets with higher institutional liquidity automatically receive priority within the basket, ensuring the index reflects the most reliable market depth across the entire ecosystem.

3. ALGORITHMIC CRASH SHIELD

Security is proactive. If any treasury asset experiences a drawdown >20% from its recorded peak, the 'Crash Shield' triggers automatically, slashing the asset's weight to 20% of its base allocation and migrating value toward stability assets (USDC/WETH) to protect the Net Asset Value (NAV).

4. GUARANTEED APPRECIATION MODEL

GBLIN redefines yield through a unique fee structure:

- 0.1% MINTING FEE: Applied only at entry.
- 0.05% Development Fund: Sustains protocol innovation.
- 0.05% Stability Reserve: Purchases treasury assets WITHOUT minting new GBLIN, mathematically increasing the intrinsic value of every circulating token.
- 0% TRANSFER FEE: Optimized for high-frequency utility and global payments.
